

Editorial

We are happy to present the third edition of Perspective Magazine in Education, Management & Technology. In this edition, you can see that the magazine, which has emerged as a mean of scientific dissemination of FATEC Itapetininga, has broadened its scope, also, serving for the publication of scientific texts by teachers and researchers linked with other educational institutions, which for us is a reason of pride.

On the other hand, we are aware that new challenges are imposed on us, as we achieve a greater number of readers, with the participation of an increasing number of authors and several themes which are developed.

In line with the mission of the magazine that is to "Disseminate scientific investigations that contribute to the development of education and technological projects of relevance to the areas of Education, Management and Technology", another feature of this edition refers to the appreciation of interdisciplinarity on the four published texts.

The first paper deals with a subject about Education, presenting results of a survey conducted in the city of Bariri-SP, which addresses the inclusion of people with disabilities in municipal schools. In turn, both the second and the third papers bring results of literature reviews on topics of relevance to Company Management, one addressing the issue of bullying at work, while the other attempts to systematize didactically the characteristics of enterprise logistics system.

The magazine's editors do hope that the papers published here are not restricted to a record of scientific production of writers, but that they contribute to the development of new knowledge or its application in several segments of society.

Have a nice reading!

Prof. Dr. Ricardo Serra Borsatto
